

Abstract of the Disclosure

A software system for enabling remote data access to and task
5 execution on a data processing system through a proxy server has an
instance of the software residing on the data processing system for receiving
and analyzing requests and performing according to request directive, and
an instance of the software residing on the proxy server for identifying and
10 authenticating a user and for redirecting requests to the data processing
system. The system is characterized in that a user connects to a network
accessible to the data processing system and initiates a request for services,
wherein the request is after authentication of the user, redirected from the
proxy server to the data processing system for task execution and possible
15 return of results according to the contents of the request.
